EXPERIENCE		
	Research Assistant, Carnegie Mellon University Ph.D. research in the Robot Perception Lab , on visual-tactile perception for robot manipulation. Currently working on estimating object shape and pose via planar pushing. Previously developed algorithms for active exploration and stereo visual SLAM in underwater environments.	2017 - present
	Undergraduate Research Scholar, Carnegie Mellon University RI summer scholar working with Red Whittaker on visual state-estimation via self-perception for planetary rovers.	Summer 2016
	Undergraduate Research Scholar, Indian Institute of Science Work with R. Venkatesh Babu and R. K. Sarvadevabhatla on freehand sketch understanding through eye-gaze fixations.	Summer 2015

TEACHING	Teaching Assistant, 16-833: Robot Localization and Mapping Course project mentorship, office hours, grading, presented lectures on occupancy mapping [1] and sparse visual SLAM techniques [2, 3].	Fall 2019, Spring 2020
SERVICE	Reviewer: International Conference on Intelligent Robots and Systems, IROS (2020) Admissions committee: CMU RI Summer Scholars program (2018-2020) Mentorship: CMU AI undergraduate mentorship program (2019), NIT Trichy Jiteshraj Scholarship (2018)	
AWARDS AND HONORS	RECAL Alumni Award and Sri. Avinash Memorial Award, 2017 (<i>gold-medalist in undergraduate major</i>) OPJEMS Scholar , 2017 (<i>100 undergraduates across India</i>) S. N. Bose and Robotics Institute Summer Scholar , 2016 Cargill Global Scholar , 2015 - 2017 (<i>10 undergraduate sophomores across India</i>)	
SELECT COURSEWORK	Graduate: Convex optimization (10-725), kinematics, dynamics and control (16-711), geometry-based methods in vision (16-822), planning and decision-making in robotics (16-782), robot localization and mapping (16-833), introduction to machine learning (10-701), computer vision (16-720), mathematical fundamentals for robotics (16-811) Undergraduate: Data structures and algorithms, computer networks, neural networks and fuzzy logic, image processing, basics of programming, control systems, robotics, signals and systems, circuit theory, embedded systems, linear integrated circuits, sensors and transducers, material science, numerical methods	
INDEPENDENT PROJECTS	DeepGeo: Photo localization with deep neural network (10-701) A deep network that beats humans at GeoGuessr —trained on our <i>50States10K</i> dataset. Task and motion planning for robotic food preparation (16-782) Hierarchical task and motion planning for a 6-DOF robot arm—to prepare yogurt parfaits! Thin structure reconstruction via 3D lines and points (16-822) We combine edge data and sparse features in the SfM pipeline to recover thin objects in a scene. Factor graph optimization for dynamic parameter estimation (16-711) We implement a method for estimation of MAV poses and dynamic parameters during flight.	(arXiv / github) (report) (poster) (report)
